

Putnam County Courtroom Presentation Technology

Courtroom 305 has a TV mounted on the wall with VGA, Audio Jack, and HDMI jacks available for plug-in. You will be responsible for bringing your own HDMI cable to connect to the TV.

Courtrooms 217, 302, 316, and 515 have podium hookups for the TVs mounted on the walls of the courtroom. Only HDMI connections available.

Please note that hearing room 400 does **not** have presentation options available.

The extenders below can be used to reach from the wall to the laptop in **Courtroom305**.

An HDMI extension cable (which has one female end and one male end).

An HDMI coupler (which has 2 female ends) plus a second cable (HDMI).

You will be responsible for securing any cables you run across the floor, but you may **NOT** use tape with a heavy adhesive like duct tape. Instead, we recommend a Velcro-type covering, a molded channel, or tape that will not leave a glue residue or otherwise mark the carpeting, such as a light-duty gaff tape (often labeled as “easy release,” “clean release,” or something similar).

Please note that the County provides public Wi-Fi as a courtesy to the public. Users should test their equipment before the hearings as Court Technology cannot support users' devices and public Wi-Fi.
